Test 2 Study Page • Summary

Name: _____ Grade: _____

The **skeletal system** supports the body. It also protects certain organs and allows movement. It consists of bones and joints.

Some of the principal bones in the body are:

The **muscular system** consists of muscles and tendons. Muscles contract and expand to make the body move. Tendons connect the muscles to bones. Movable joints allow muscles and bones to interact, producing all the movements of the body.

The skeletal system and muscular system together are called the **musculoskeletal system**. It is important to exercise to keep this system healthy. Some of the principal muscles are:

The **nervous system** is in charge of receiving and interpreting information and controlling bodily responses. It consists of:

Alcohol is a substance found in alcoholic beverages. It is considered a drug because it alters the normal functions of the body when it is consumed. Alcohol can cause addiction in addition to having harmful effects on bodily organs, especially those shown in the image.

To avoid alcohol, you can do the following:

- Promote open communication within the family.
- Play sports and do exercise in your free time.
- Get together with friends to eat and drink healthy products.
- Learn about the harmful effects of alcohol.

Test 2 Study Page • Review

Remove, answer, and glue in your notebook.

Section 1

1. Find seven bones in the word search.

R	A	D	I	U	S	G	F	E	M	U	R
R	Q	E	H	J	U	M	Z	H	P	L	M
A	S	R	I	V	R	C	L	W	Y	N	O
B	V	E	R	T	E	B	R	A	E	A	G
T	L	F	A	N	M	U	E	R	S	P	H
K	I	E	X	B	U	M	A	L	B	F	D
S	Y	B	D	J	H	W	C	R	I	B	S
X	I	Q	I	F	M	U	L	G	T	S	V
P	D	A	N	A	S	H	W	K	B	C	R

2. What are the functions of the skeletal system?

_____

_____

Section 2

3. If you pick up a book with your hand, how does your arm move? Explain, considering the function of each of the arm's parts.

_____

_____

_____

4. What are the benefits of physical activity for the musculoskeletal system?

_____

_____

Section 3

5. Write the part of the nervous system that corresponds to each description.

It controls breathing, blood circulation and some eye movements.	
It sends information to and from the nervous system organs in the cranium.	
It coordinates muscles, posture and balance.	
They are in all parts of the body, sending and receiving information.	
It controls functions like thought and memory.	

Section 4

6. Mark the parts of the body that are affected by consuming alcohol.

- ☐ heart
- ☐ liver
- ☐ bones
- ☐ brain
- ☐ hair
- ☐ pancreas
- ☐ skin
- ☐ stomach
- ☐ fingernails
